

## **FOR IMMEDIATE RELEASE**

### **RE2, Inc. to Provide JAUS SDK for AUVSI Unmanned Systems Competitions**

*RE2 Releases a 'No Cost' Competition Version of its Flagship RE2 JAUS SDK*

**PITTSBURGH, PA** – April 16, 2008 – RE2, Inc., a leading developer of Joint Architecture for Unmanned Systems (JAUS) software solutions and intelligent modular manipulation systems, announced that it is releasing a limited edition, competition-only version of the RE2 JAUS Software Development Kit (SDK) for use in the AUVSI 2008 Student Unmanned Systems Competitions.

The goal of this release is to promote the JAUS standard and encourage participants to implement JAUS in their competition entries. Teams will be able to tackle the challenges associated with unmanned systems interoperability by using a proven toolkit to implement JAUS onto their platforms. This edition will be available at no cost for registered participants in the 2008 AUVSI sponsored competitions.

The JAUS SDK will include the core functionality of the commercial version with a limited message set - including only the messages defined by the competition rules. The competition version will also include documentation for installing and using the JAUS SDK. In the spirit of competition and the desire to remain unbiased, RE2 will abstain from providing direct support for the JAUS SDK or guidance for implementing JAUS.

“We have developed a competition version of our RE2 JAUS SDK to provide the students with a proven, real-world solution for unmanned systems interoperability”, stated Jorgen Pedersen, president and chief executive officer of RE2, Inc.

RE2 believes that making the JAUS SDK available to the student competitors will not only benefit the students but it will also help to further the unmanned systems industry. Student competitors will gain valuable experience learning about JAUS and will be able to apply the knowledge onto future projects. Pedersen continued, “By implementing JAUS during the unmanned systems competitions, students will bring both an understanding of interoperability standards and JAUS expertise with them as they transition into the workforce.”

###

**About RE2, Inc.**

RE2, Inc. is a leading developer of intelligent modular manipulation systems and JAUS software solutions. The Company's manipulation systems utilize the RE2 JAUS Software Development Kit to ensure interoperability with fielded robotic platforms. RE2's customers include the Army, Navy, government labs, universities, and defense prime contractors. RE2's expertise lends itself to several markets, including defense, law-enforcement, homeland security, and explosive ordnance disposal.
